Artificial Intelligence in 2020, waar moeten business leaders op letten?

Artificial Intelligence is veelomvattend: van het spelen van games tot gezichtsherkenning en zelfrijdende auto's. De meeste mensen realiseren zich niet eens hoe vaak AI achter de schermen werkt om ...

What we cover today

- Introduction to AI
- Reporting & dashboarding now a days
- AI in Power BI
- Demo time!

Artificial Intelligence

For me as a newbie in this area

Artificial intelligence (AI)

Any techniques that enable machines to solve a task in a way like humans do

Machine learning (ML)

Algorithms that allow computers to learn from examples without being explicitly programmed

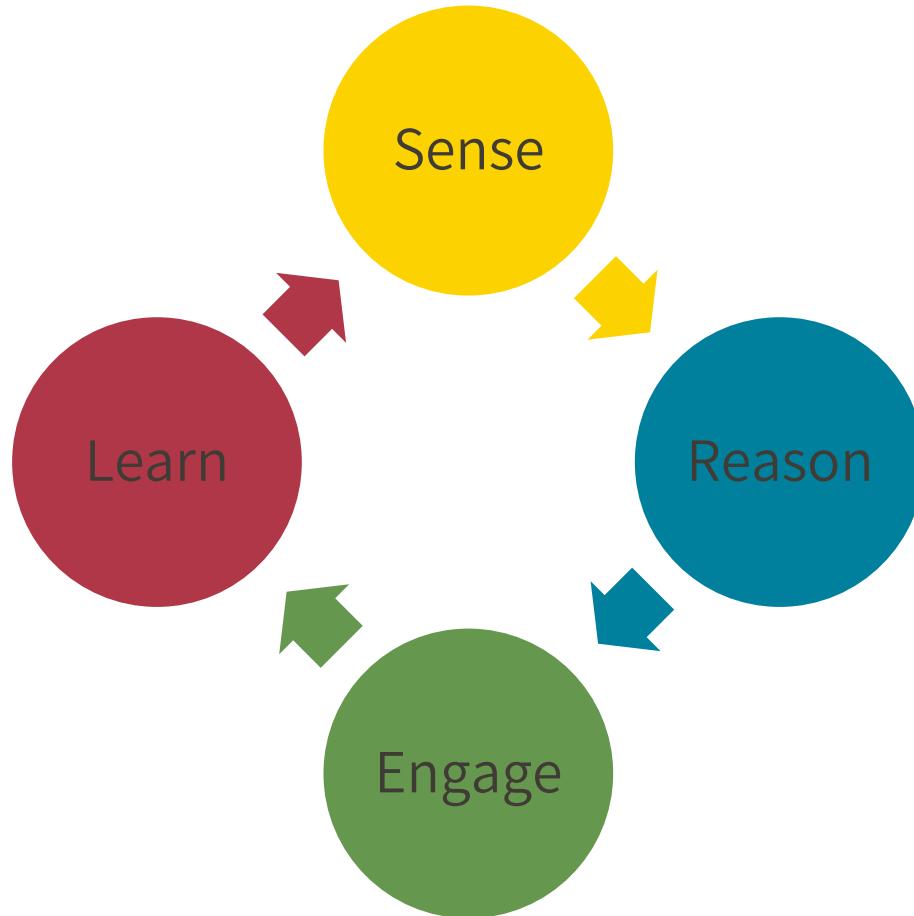

Artificial neural networks (ANN)

Brain-inspired machine learning models

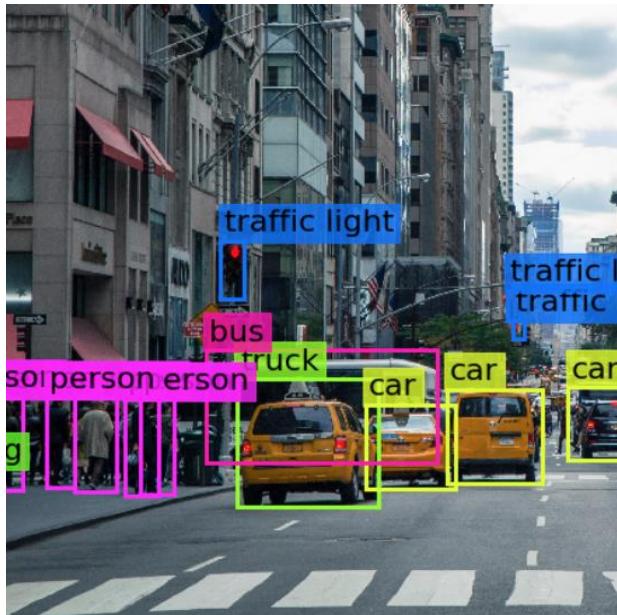

Deep learning (DL)

A subset of ML which uses deep artificial neural networks as models and automatically builds a hierarchy of data representations

Artificial Intelligence

Ability to sense, reason, engage and learn!

Computer vision

Voice recognition

Robotics

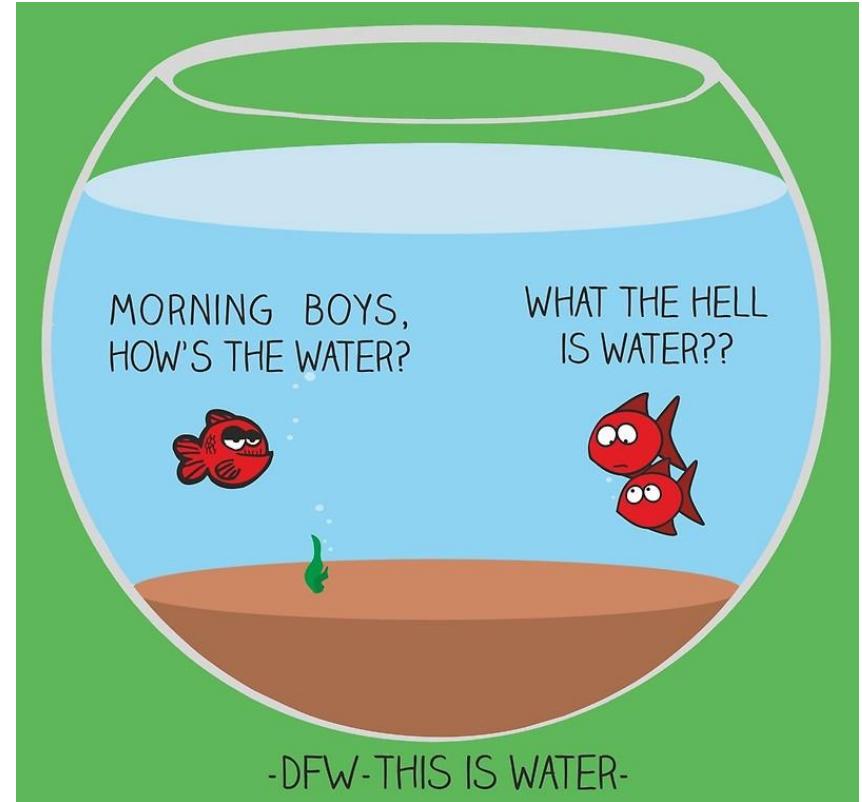

And more....

AI != Innovation

Does not understand the real world!

But Artificial Intelligence can:

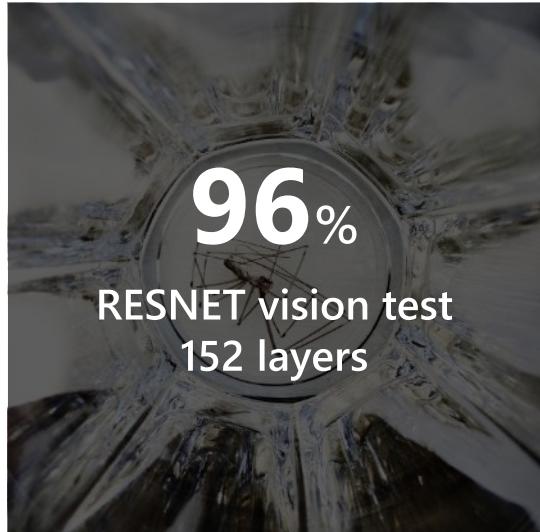

- Learn
- Optimize
- Detect patterns
- Inform
- Inspire

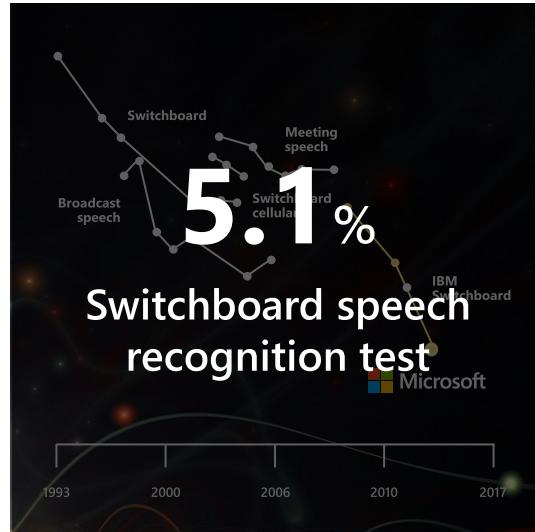

AI lives in water, yet it doesn't know what water is.

Pervasive application of AI

New capabilities that make AI accessible for everyone

- Text analytics and image recognition through Azure Cognitive Services integration
- Key driver analysis helps surface what drives an outcome
- Enable business analysts to create new ML models through Automated ML
- Seamless collaboration between business analysts and data scientists through Azure ML integration

The screenshot shows the Power BI Entities screen. The title bar reads "Power BI AI test > SalesOpportunities". The left sidebar has icons for Home, Entity, Machine learning models, and Data flow. The main area shows a table with columns: ENTITY NAME, ENTITY TYPE, and ACTIONS. The ACTIONS column contains icons for Edit entities, Add entities, Save, and Close. The table lists the following entities:

ENTITY NAME	ENTITY TYPE	ACTIONS

The image shows a yellow-themed cheat sheet for Power BI. It includes sections for Power Query (with tips like 'Give every step an explanatory name and merge steps of the same type, for better M coding experience.'), Data Model (with tips like 'Always use a separate Date table in your data model. Mark it as a Date Table.'), and DAX (with tips like 'In DAX, (un)comment DAX lines by pressing Alt + Shift + A or CTRL + /, and Shift + Enter for line breaks.'). The document also features a 'Resources' section with links to Power Query M Formula Reference, Power BI Studio, and Tabular Editor.
